

I am urging you to not allow the petition on banning XM from broadcasting weather and traffic news over their satellite network. I travel a lot, from Kansas to North Carolina and lots of states in between. I depend on this information while driving. You do realize how hard it would be to go to a television set to get this information while driving don't you? I need to know what to expect in weather and traffic so that I can alter my route or adjust my plans accordingly. You will need the same information for your job, do you want to be limited in what is going on around you while you drive, because you can not get to a television set? Local AM & FM channels do not give this kind of information in advance, since they can not reach us drivers more than a few miles from their stations. What good is hearing the traffic problems in Atlanta, once in Atlanta, we need to know before we get caught in the middle of it. This way we can avoid the problem area and not become another part of the problem.
